

AC-PRO® to AC-PRO-II® Upgrade

EASY.

Most of our customers have already been using AC-PRO-II® for years, but for those who haven't yet made the switch, doing so has never been easier. Upgrading circuit breakers currently fitted with legacy AC-PRO® (commonly referred to as AC-PRO-I) is as easy as swapping out the trip unit and mounting brackets, and installing a wiring harness adapter. CTs and actuators are reused, which makes for a quicker and less expensive retrofit.

MODERN FEATURES.

AC-PRO-II® brings a host of new and improved features to low voltage protection. Communications, onboard QUICK-TRIP® arc flash reduction maintenance switch, Sluggish Breaker® detection, Scheduled Service Reminder, trip history, waveform capture, and much more all come standard. Add voltage protection and power monitoring with the optional voltage divider module (VDM) accessory, and bring remote monitoring and control to the next level with Smart 1-Line™ and BREAKER-IQ™.

FUTURE PROOF.

AC-PRO-II® is our flagship universal trip unit that fits on thousands of circuit breaker makes, models, vintages, and configurations. We continue to develop new features and capabilities for AC-PRO-II®, both via internal firmware upgrades and external accessories, making it the best supported solution in the industry.
