

AC-PRO-II®

NO BREAKER LEFT BEHIND

Our family of LV trip unit upgrade kits continues to grow and our industry-leading AC-PRO-II® universal trip unit keeps getting better. Safety has always been our top priority, and in addition to LSI protection, our QUICK-TRIP® arc flash reduction technology, and our patented Sluggish Breaker® detection, AC-PRO-II® now includes:

NEW FEATURES

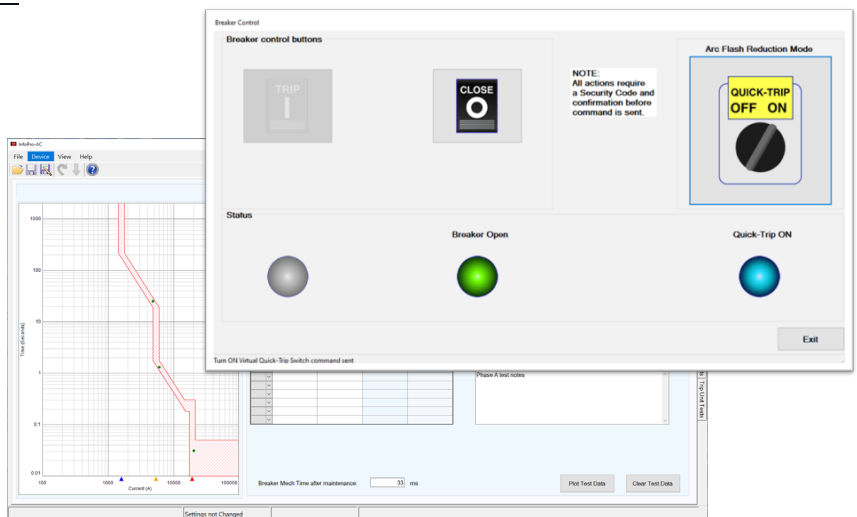

- Scheduled Service Reminder
- Power Demand Metering (KWD/KVAD)
- Reverse Power Protection (Trip or Alarm)
- Breaker Control (Trip and Close, via USB or RS-485)
- CT auto-polarity correction
- Soft Quick-Trip® Control (local, USB, RS485)
- Zone Block Output Signal
- Breaker Cycle Counter
- Current Unbalance Protection (Trip or Alarm)
- LSI Protection for Neutral

InfoPro®

AC-PRO® SETUP, DATA RETRIEVAL & CONTROL SOFTWARE

We make setting up and commissioning your AC-PRO-II®, AC-PRO-MP®, and AC-PRO-NW™ trip units quick and easy with our InfoPro software. Save settings files to load into multiple trip units and create test reports complete with results plotted on time-current curves (TCs). Download and save waveforms and trip data. Additionally, you can now trip and close your circuit breaker and enable QUICK-TRIP®, all from a safe distance away via USB connection.

URC Utility Relay Company

AC-PRO-NW™

First released over 15 years ago, the MasterPact NW low voltage circuit breaker has a large install base throughout the country as well as throughout the world. When the Micrologic trip unit or Rogowski sensors fail, the only available solution is to track down OEM components, which is becoming increasingly difficult. Well, that is about to change.

AC-PRO-NW™ brings all of the safety and reliability features you trust from URC to the MasterPact NW family of circuit breakers – LSIG protection, QUICK-TRIP® arc flash reduction, Sluggish Breaker® detection, communications, and optional power metering and voltage protection. New features include remote trip/close, wireless communications, scheduled service reminders, and more.

All of this designed with ease-of-installation in mind and supported by the best 24/7 technical support in the industry.

- Replaces MicroLogic & Current Sensors
- QUICK-TRIP® Arc Flash Reduction
- Scheduled Service Reminder
- RS485, USB, & Wireless Communications
- Sluggish Breaker® Detection
- Delay Trip/Close

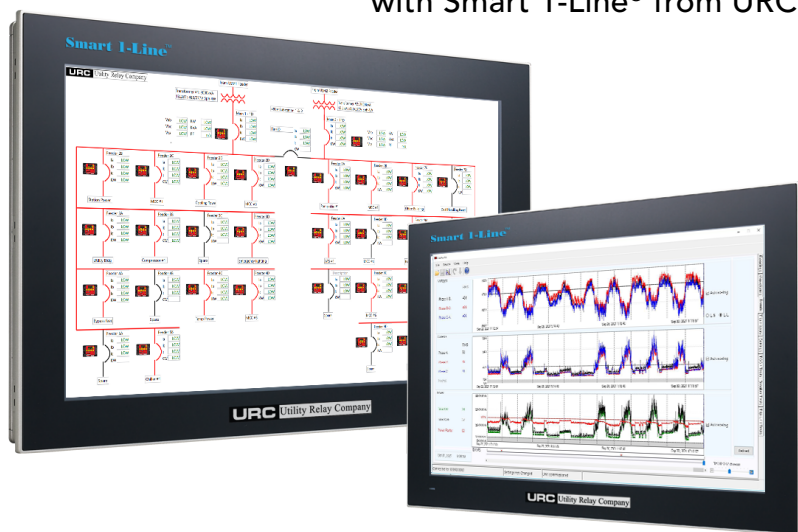

Smart 1-Line™

A pre-engineered network monitoring system designed to simplify the installation and configuration of a local HMI.

Based on a rugged Industrial computer with a solid state drive and a 21.5" high-definition touchscreen, Smart 1-Line™ is URC's modern turn-key solution for monitoring your AC-PRO-II® and AC-PRO-NW™ networks at one convenient location. It displays a field-configurable electronic 1-Line diagram with breaker readings, status, trending, remote breaker trip/close, and more.

Improve Safety and Increase Productivity with Smart 1-Line® from URC.
